

CORPORATION

“Excellence in Development and Management of Large Scale Projects”

www.iccorporation.com

About us

MORE THAN 120 YEARS OF BUSINESS EXPERIENCE

The company started its operations and business endeavours in 1896. Throughout its history the corporation has accumulated a vast knowledge in many different industries such as soft commodity trading, real estate, financial services, and project development.

As of 1995 and as a result of its broad experience and magnification, IC Corporation has been particularly active in the fields of Engineering, Procurement, Construction, Maintenance, and Management Services for large-scale projects in worldwide locations.

The company's expansion around the globe allows having a rooted knowledge of the technical standards, laws, and regulations, taxes, financial entities, labor unions, and subcontractors in the regions where it operates.

IC Corporation has gained an international reputation for its technology and construction capability, consolidating its position locally and abroad by participating in various infrastructure projects, including electrical and FO submarine cabling, OPGW wire projects, compression and transport of natural gas, and other mid to megaprojects.

IC Corporation has the capability to proficiently complete high complexity projects, ranging from the early stages of design to the final execution, making sure that each project is taking care of the environment and the welfare of the surrounding communities.

As a responsible citizen enterprise, IC Corporation always puts the protection of the environment and life's safety first. The company implements strict health, safety and security protection for employees, customers, partners, and the public as well.

What we do

Areas of Expertise

Sustainability

Sustainability is one of the most important concepts in the world in the present day.

According to the United Nations, sustainability takes place when the present needs are met without compromising the ability of future generations to meet their own needs.

Our planet and all living creatures, including the human race, is facing significant environmental and economic challenges. Still, there are numerous remote communities around the globe who do not have access to basic services, such as potable water.

As a result, IC Corporation developed a comprehensive new business model named IC4S; a 100% equipped turnkey solutions which contribute to the sustainable development of communities, while encouraging a conscious use of natural resources.

Consulting Services

IC Corporation Consulting works alongside client-partners to design and develop innovative technologies and services that improve their business both today and tomorrow, creating solutions that help companies reduce costs, save energy, limit environmental impact and improve working conditions for their employees.

Together, our experts share a strong sense of passion for their work. By channeling this passion through professional expertise, they're able to anticipate trends and transformations within the industry,

helping clients identify and take advantage of new opportunities the moment they're available. IC Corporation is positioned as one of the industry's most trusted leaders by relying on a distinctive business approach defined by innovation, reliability, sustainability, and leverage.

International Trade Solutions

IC Corporation provides turnkey solutions. IC Corporation has a worldwide network of partnerships and relationships with manufacturers and providers. In addition to our international relations, we have an understanding of exchange rates and how they fluctuate rapidly, which is key to identify when to purchase an item from a specific country. This, coupled with our understanding of the international trade cycle and the trade barriers and

risk, we can provide products to our customers from anywhere around the globe. Thanks to our experience in commerce we put our team of product analysts and purchasers to work immediately. If a product that is already on the market, but is required for distribution, we search for the best quality and price as well as the quickest turn-around to meet our customer's needs. If the product is to be manufactured to customer specifications,

our analysts and purchasing team will search around the world to provide the best product. The customer is involved throughout the process to provide their input and approvals. Our import/export team will determine the most expeditious means of getting the product to the customer.

Energy Solutions

IC Corporation Energy has more than 20 years of abiding relationships and involvement in South America for energy-related development, and integration projects.

We are prepared to meet each new challenge, actively developing energy-related projects which contribute to the

development of countries worldwide. In synergy with international partnerships, IC Corporation Energy has been active in the exploration and production of oil, gas, and electrical power.

High-Tech Telecommunication Solutions

IC Corporation is a leader in telecommunications with more than 20 years of experience. Since 1995 we have provided our clients with the design and installation of technological solutions of the highest quality. We serve a variety of industries, including banks, construction companies, telecommunications companies, government institutions, among others.

IC Corporation can develop and manage the entire telecommunications project from conception and design to the final equipment setup and training; providing design and implementation of your networking system for any scenario; using the best components.

Residential & Commercial Construction

IC Corporation Construction provides engineering, procurement, construction, operation, and management services for large-scale projects in worldwide locations.

The company's multi-local presence allows it to have deep knowledge of the technical standards, laws, and regulations, taxes, financial entities, labor unions, and subcontractors in the regions where it operates.

Thanks to its broad experience in the market, our Organization can develop high complexity projects, from design to execution, taking care of the environment and the welfare of the surrounding communities. With more than 20 years of experience, it has completed many projects in compliance with ISO/BS/OHSAS international standards in Latin America, the Caribbean, and Europe.

Additionally, with stable PMI-qualified direct hiring experience, combined with sub-contracting track record, careful time management, and construction solutions ability in the harshest environmental conditions contribute to delivering quality EPC to the most demanding customers.

Business Portfolio

EPC & EPCM

Since 1995, IC Corporation has been committed to sustainable development in its civil, energy, telecommunication infrastructure, and building solutions.

IC Corporation has gained an international reputation for its technology and construction capability, consolidating its position locally and abroad by participating in various infrastructure projects, including electrical and FO submarine cabling, OPGW wire projects, compression and transport of natural gas, and other mid to megaprojects.

The EPC business of communications, electric power, and infrastructure are some of IC Corporation's important

business segments. The company has an EPC project management team with leading technologies and international partnerships who have been long committed to providing comprehensive, effective and reliable full life cycle services ranging from feasible research and investment/financing planning, survey/design, and construction, to operations and maintenance for global customers in EPC, Build-Operate-Transfer (BOT), Build-Transfer-Operate (BTO), Public-Private Partnerships (PPP) and other contracting methods in the fields of Conventional and Green Energy, Construction, Communications, and Sustainability.

The company has developed into a notorious service provider. Furthermore, as a global player, we have created long-lasting international agreements and relationships with key partners and investors, launching IC Corporation into the commodity & trade, and government contracting segments.

As a responsible citizen enterprise, IC Corporation always puts the protection of the environment and life's safety first. The company implements strict health, safety, and security protection for employees, customers, partners, and the public as well.

Sustainability

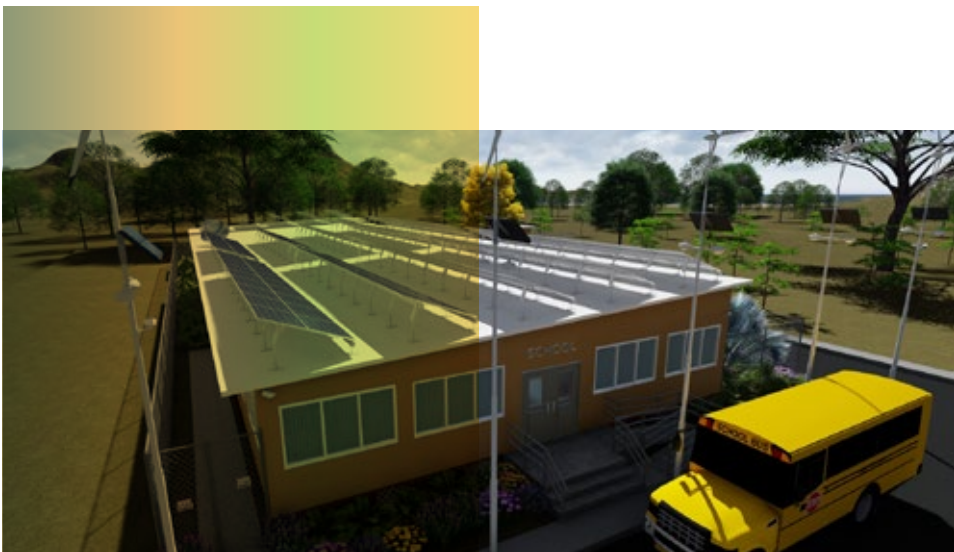

IC4S Solutions

Sustainability is one of the most important concepts in the world today. According to the United Nations, sustainability takes place when the present needs are met without compromising the ability of future generations to meet their own needs. Hence; our planet is facing significant environmental and economic challenges.

IC Corporation developed a new solution model called IC4S. IC4S contains turnkey solutions, 100% equipped. These solutions contribute to the sustainable development and wellbeing of the population and encourage a conscious use of natural resources.

The concept of "IC4S (IC 4 Sustentability)" focuses on self-sustainable systems and structures that do not depend on external suppliers to obtain basic utilities such as electric power, potable water, waste services, and internet connectivity.

Our unique solutions integrate eco-friendly materials, renewable energies, water and wastewater treatment, solid waste treatment, and top-notch technologies. In summary, IC4S is a unique concept that covers a diverse spectrum of solutions to enhance the quality of life of communities.

IC4S - Sustainable School

This school building model is autonomous and sustainable. It focuses on the efficient use of natural resources and highly resistant materials. Our sustainable school includes classrooms, a library, a cafeteria, administrative offices, a recreational and a multipurpose area, and more.

This school also has an area destined for the installation of a water treatment plant, a septic system, an incinerator, and a battery bank system. This will process potable water, treatment of wastewater, solid waste, and storage of solar energy, all of which is generated on site. Furthermore, it includes all consumables, materials, and equipment needed for the continuous operation of the school. IC Corporation provides the knowledge transfer and tools required for the installation and maintenance of the school.

IC4S- Community Health Center

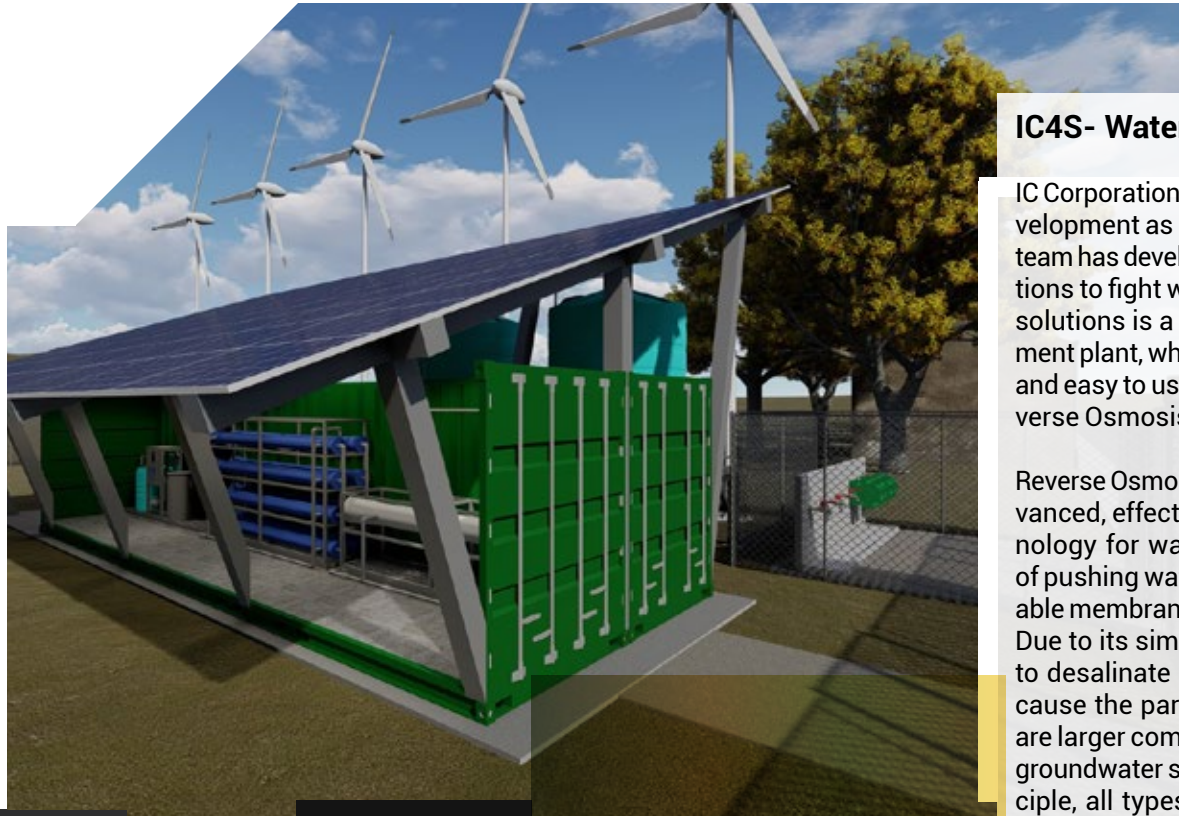

IC4S- Community Health Center The self-sustained Healthcare Center focuses on the efficient use of energy and renewable resources. As part of our commitment to provide high-quality medical services, this Healthcare Center includes, but is not limited to, an emergency room, a delivery room, an obstetrics

care room, an x-ray room, a dental and ophthalmology rooms, and a laboratory.

This turnkey solution includes all consumables, materials, and equipment necessary for its continuous operation, as well as the pertinent transfer of technology to provide clients with the knowledge needed to maintain it.

Sustainability

IC4S- Water Treatment Plant

IC Corporation believes in sustainable development as a lifestyle. Our engineering team has developed several possible solutions to fight water scarcity. One of those solutions is a containerized water treatment plant, which is efficient, sustainable, and easy to use. The water plant uses Reverse Osmosis as its treatment process.

Reverse Osmosis is currently the most advanced, effective, and eco-friendly technology for water treatment. It consists of pushing water through a semi-permeable membrane to remove contaminants. Due to its simplicity, it is the best option to desalinate seawater. This is mainly - cause the particles present in seawater are larger compared to other surface and groundwater sources. Based on this principle, all types of water sources can be treated by reverse osmosis. Therefore, our water treatment plant is an excellent solution for providing drinkable water.

IC4S- Sustainable Farm

IC4S-Farm Is a sustainable and fully automated farm. Different types of animals can be raised for commercial purposes. Renewable energy is used to power the farm; e.g., It has a water treatment plant on-site. Additionally, crops are sown and harvested on-site to feed the farm animals and to supply local markets. Moreover, the organic waste generated from the farm animals is recycled into their food chain. The residue from the harvest can also be included in the food chain and used as organic compost.

Hybrid Street Lighting

IC Corporation promotes a series of LED products for street lighting. The LED HB180 shape resembles a seagull, with an avant-garde design, excellent quality, long service life of more than 50,000 hours, and environmental protection.

Our HB-180 street-light pole uses Meanwell/Moso & Philips LED drivers, and Philips/Cree or Osram LED's to provide exceptional energy efficiency.

This luminary is made of cast and extruded and recyclable aluminum. It improves energy savings with its optional light attenuation, programmable illuminators, and outdoors control system.

COMMODITY TRADING & OTHER BUSINESS ENDEAVOURS

IC Markets International Ltd is part of IC Corporation's Group of Companies and trades commodities and other semi-finished and finished products on a global scale for a wide range of industries. We are dynamic, responsible, financially sound.

Established in 1896, IC Markets International has become one of the largest, integrated commodity trading companies in the world.

Soft-commodity trading experience dealing with futures contracts where the actuals are grown rather than extracted or mined. Soft commodities represented some of the oldest types of futures know to have been actively traded. This storied group included cotton, sugar, rice, and wheat as well as all manner of livestock. Soft commodities were sometimes referred to as tropical commodities or food and fiber commodities.

IC Markets International has traded in a large number of business ventures including but not limited to:

- **Soft- commodity trading** experience dealing with futures contracts where the actuals are grown rather than extracted or mined. Soft commodities represented some of the oldest types of futures know to have been actively traded. This storied group included cotton, sugar, rice, and wheat as well as all manner of livestock. Soft commodities were sometimes referred to as tropical commodities or food and fiber commodities.
- **Real estate worldwide**, for decades ICMI has been fully committed to Build on its tradition and dedicated to innovation, the ICMI's brand artfully unites connoisseurs of life with their aspirations through a deeply connected global network of exceptional people.
- **Heavy machinery supply**
- **Advisory services on financial products**, for quite some years ICMI has been an intermediary dealing with different financial products and in-

struments. Through a seamless combination of quantitative expertise, public finance banking experience, and in-depth market advisory services, ICMI smart and creative ways have been pivotal for municipal governments and education entities to fund their capital needs.

• **Extensive experience in the building materials**, and construction supply market includes engagements with manufacturers and distributors that provide cement Portland, lumber, flooring, windows & doors, ceilings and drywall, paint and other interior products, plumbing and electrical products/ services and more.

• **We deal in the international physical trading of metals and minerals.** Our metals team is based in Orlando, Florida, with representation in, South Africa, Peru, Turkey, and West Africa. We trade in base metals, minor metals, and minerals such as copper, lead, zinc, tin, antimony, and zircon sand.

Our principal focus is on the procuring and trading of ores, concentrates, residual by-products, alloys, and refined metals. Besides, IC Markets International has several specialist divisions which among their core activities includes the recycling of steel materials, as well as other scrap metals.

Our key regions of businesses are in Europe, North America, China, India,

and developing countries with metal and mineral resources. We trade internationally on both spot and term contracts. We use our market knowledge, localized networks, and good working relationships with our Regional Offices to trade physical commodities internationally.

• **Agricultural commodities** have been a vital part of our experience. These commodities fall into the category of soft products, which include but are not limited to sugar, cocoa, wheat, and coffee. Also, we have experience trading food crops, such as corn and soybeans; Livestock, such as cattle and pork bellies; Industrial crops, such as wool and rubber.

• **Semi-finished and/or finished products** for a wide range of industries.

Through business hubs in the U.S., China, Spain, Panama, Venezuela, Australia, New Zealand, Canada, and the Dominican Republic, we ensure a strong, reliable worldwide presence. In support, we operate a growing portfolio of production, logistics, and storage assets.

Our development is founded on organizational growth and expansion. We actively make substantial new investments in partnerships with customers, as well as in our network of commodity producers.

Energy Solutions

IC Corporation Energy has more than 20 years of abiding relationships and involvement in South America for energy-related development and integration projects.

We are prepared to meet each new challenge, actively developing energy-related projects which contribute to the development of countries worldwide. In synergy with international partnerships, IC Corporation Energy has been active in the exploration and production of oil, gas, and electrical power.

Electricity

We provide installation, development, investment, construction, operation, and management of power generation plants. We also assist in the sales of power and heat. We are also heavily involved in coal power generation plants, new energy, high-tech, environment protection, technological services, and consultancy.

We have the background and experience to design and install High Voltage and Ultra High Voltage Power Generation plants. Our expertise comes from over 20 years of innovation in the power generation field.

We can develop clean coal power generation, build up energy-saving and environmental-friendly coal-fired power plants; improve the scale and quality of hydro-power plants; increase renewable energy percentages; develop new energy sources (wind power and solar energy); promote comprehensive development and establish low carbon

energy; develop a high-tech based industry, and form a world-class comprehensive energy group.

IC Corporation has constructed and installed high voltage power transmission lines and substations in different countries around the world. Our specific expertise covers the design and manufacture of structures, purchase of materials and equipment, civil works and the selection, testing, installation and commissioning of the plant. The tasks are always executed by applying stringent standards concerning efficiency and quality to all stages of the project.

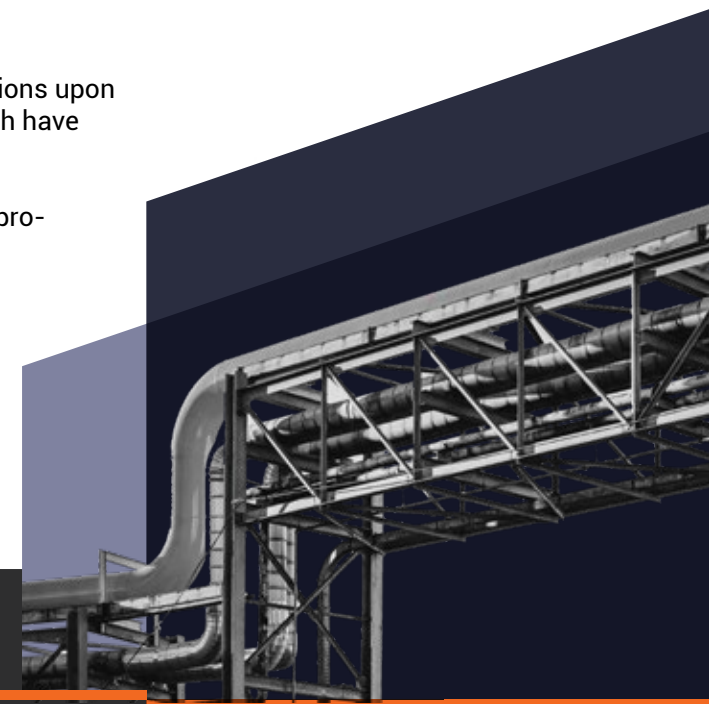

Oil & Gas

Investment in technology and continuous improvement are the foundations upon which IC Corporation has built robust and sustainable growth, and which have underpinned its success in achieving the objectives it initially set forth.

Our Organization deploys the most efficient technology known to-date professionals to increase productivity in operated areas, control operating costs, and minimize the environmental impact of its operations.

IC Corporation Energy carries out its operations in an environment which it shares with both neighboring communities and its employees. It carries out an environmental management system developed to meet international standards and applies the latest technologies for this purpose.

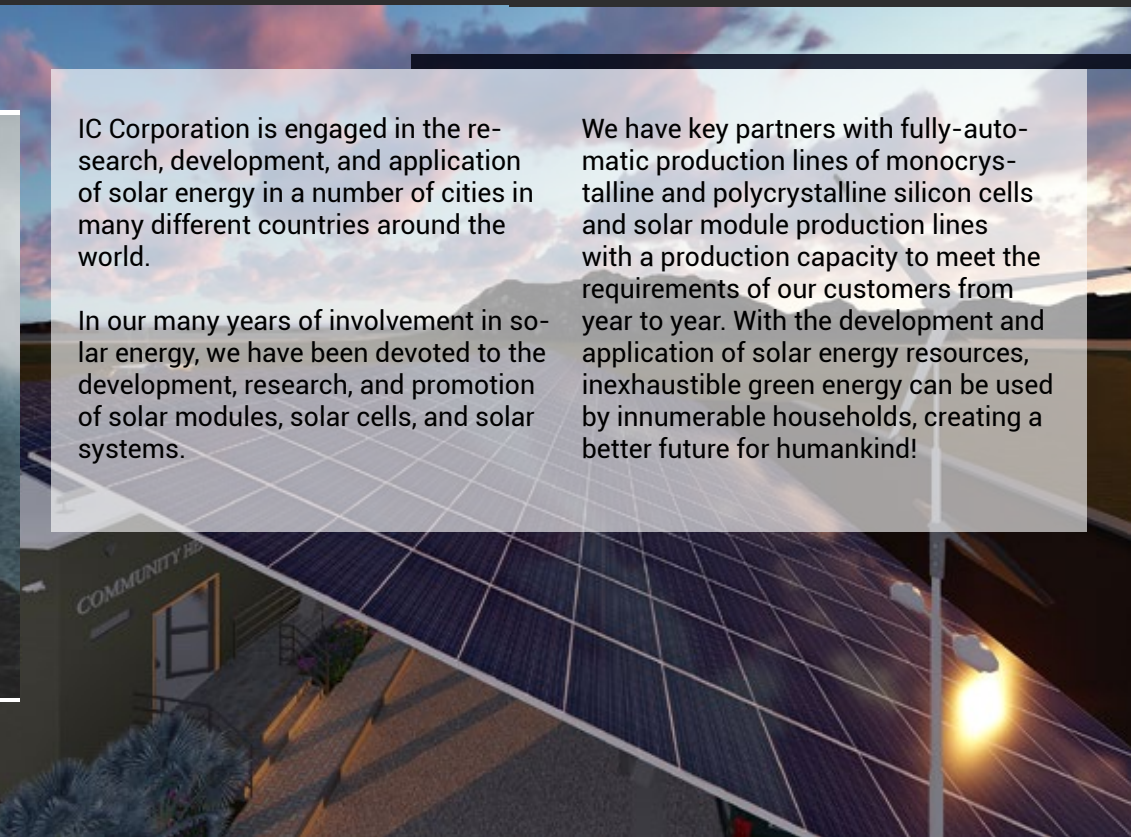

Green Energy

IC Corporation is engaged in the research, development, and application of solar energy in a number of cities in many different countries around the world.

In our many years of involvement in solar energy, we have been devoted to the development, research, and promotion of solar modules, solar cells, and solar systems.

We have key partners with fully-automatic production lines of monocrystalline and polycrystalline silicon cells and solar module production lines with a production capacity to meet the requirements of our customers from year to year. With the development and application of solar energy resources, inexhaustible green energy can be used by innumerable households, creating a better future for humankind!

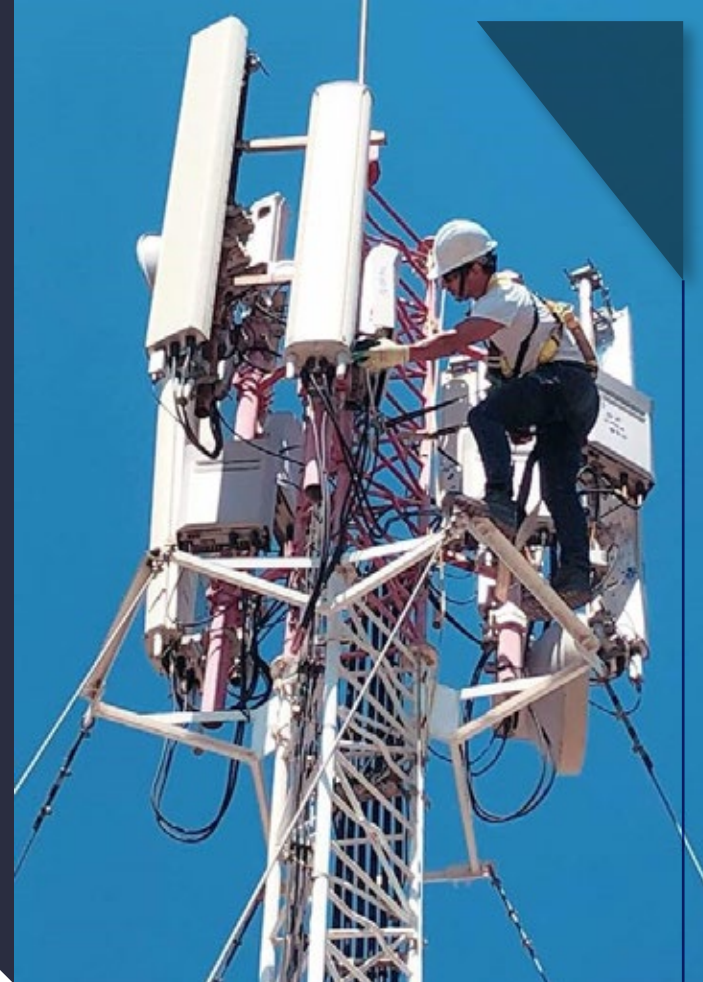

High-Tech

IC Corporation is a leader in telecommunications with more than 20 years of experience. Since 1995 we have provided our clients with the design and installation of technological solutions of the highest quality. We serve a variety of industries, including banks, construction companies, telecommunications companies, government institutions, among others.

IC Corporation can develop and manage the entire telecommunications project from conception and design to the final equipment setup and training; providing design and implementation of your networking system for any scenario; using the best components.

Telecommunication

Telephony

Although many companies are moving to other means of communications, some companies still rely on wired telephones for communications. Because of our worldwide reach and the understanding that there are some outlying areas, islands and developing countries with limited resources, IC Corporations still maintains the capability to deliver Plain

Old Telephone Service and Integrated Services Digital Network. This is in addition to our prime delivery of telephony via VoIP.

We install VoIP telephony systems for your company. IC Corporation can design, install, configure, and set up Call Center systems and provide product training for its software and equipment.

Network Infrastructure

IC Corporation provides design and implementation of a networking system for any scenario. We use the best components. We provide integration of voice, video, and data networks using the best technologies in LAN and WAN networks.

We provide engineers, technicians, and specialists in the different areas of telecommunications. We provide technical support to improve quality. We also perform preventive and corrective maintenance.

Surveillance Systems

IC Corporation is recognized as "The Transition Leader" because we provide the industry's most straightforward, cost-effective approach to video surveillance. Migration from commodity-based analog systems to the enhanced video quality characteristics of a digital Network Video Management System (NVMS) is essential for effective business operations, the protection of lives and property, and as a tool to aid the mitigation of liabilities.

IC Corporation's Video Management System (VMS) lies in the user experience from a single server to multi-site and multi-server environments.

Analog – Using our VMS offering with existing cameras to improve forensic investigations and video management.

Hybrid systems - analog and IP supported seamlessly in our VMS offering.

Transition Analog to IP – We offer the most cost-effective migration path from analog to digital while protecting your investment in analog cameras and licenses. Migrate from analog to IP without purchasing additional camera licenses.

Video Conferencing

With video conferencing, your company will have the ability to hold business meetings with partners or customers long-distance using cutting edge remote communication technology. The use of this solution can reduce your travel cost and increase your productivity. Video conferencing also provides you with the ability to produce multiple

Fiber Optic

IC Corporation provides turnkey projects in indoor and outdoor fiber connectivity. Our team of well-qualified engineers and project coordinators can manage large-scale installations from start to finish.

We manage the entire project including design, engineering, magnetic detection, fusion splicing, blowing, OTDR readings, measurements, certifications, optical distribution frames, digital dis-

tribution frame, grounding, connecting and equipment setup.

The demand for FO submarine cables is continuously increasing due to (ultra) long-distance grid connections among countries.

In combination with our partners, our Corporation can manage colossal submarine cabling projects; from producing marine route surveys, route design, system assembly and loading cable to ship, cable laying, landing, and burier.

Consulting

IC Corporation Consulting works along-side client-partners to design and develop innovative technologies and services that improve their business both today and tomorrow, creating solutions that help companies reduce costs, save energy, limit environmental impact and improve working conditions for their employees.

Together, our experts share a strong sense of passion for their work. By channeling this passion through professional expertise, they're able to anticipate trends and transformations within the industry, helping clients identify and take advantage of new opportunities the moment they're available.

IC Corporation is positioned as one of the industry's most trusted leaders by relying on a distinctive business approach defined by innovation, reliability, sustainability, and leverage.

Technology

With a wealth of knowledge in many technology areas, we share our experiences and concepts to assist companies around the world in finding and implementing technology solutions. Our team of experts assists our clients in finding the right solution for the installation of a comprehensive technology for security systems, video surveillance, and access control; customization, troubleshooting. We can assist in providing recommendations for an end to end solutions to meet the needs of today's critical application requirements for grounding data network and data centers.

Providing high quality, visually verifiable, and dedicated grounding path to maintain system performance, improve network

reliability, and protect network equipment and personnel. We make sure that your grounding system choice meets all applicable grounding standards, giving you what you need to avoid damage to equipment and communications problems and to protect your investment properly. IC Corporation has a long history in the design and installation of optical fiber links (indoor, outdoor, ADSS, underground, microfiber, overhead), networking system, and video conferencing technology. We use our experiences to advise and assist our clients through the entire project's life cycle

Management

IC Corporation has the ability to assist you administratively, providing technology training; technical career planning; and technology transfer in many different areas.

We focus on solutions concerning professional development in technology.

We make use of cutting-edge tools to develop financial and market analysis to determine demographic trends and needs. This enables you to make the best decision on how to proceed.

Furthermore, we use these tools to help you identify the strengths and weaknesses of your business. This package includes a risk analysis to help you operate your business successfully.

Administration

IC Corporation Consulting specialists can help technology companies take advantage of the ever-changing technology industry through a broad array of services designed to meet companies wherever they are, across the value chain and around the globe. We identify where business value resides and where opportunities might exist within the enterprise. Evaluate opportunities to expand the impact of cognitive techniques, and find innovative applications to dramatically improve performance, create new capabilities, and enhance the competitive position. Also, we evaluate the benefits and risks of

deploying social media tools to improve internal collaboration and customer reach while driving business performance; expand business analytics methodologies, tools, and technology to improve sales, marketing, and operating efficiencies.

"IC Corporation not only looks for great customers, but also for long standing business relations with them."

Reinaldo Suárez,
Corporate Sales Manager

RESIDENTIAL & COMMERCIAL CONSTRUCTION

IC Corporation Construction provides engineering, procurement, construction, operation and management services for large-scale projects in worldwide locations.

The company's multi-local presence allows it to have in-depth knowledge of the technical standards, laws, and regulations, taxes, financial entities, labor unions, and subcontractors in the regions where it operates.

Thanks to its broad experience in the market, our Organization can develop high complexity projects, from design to execution, taking care of the environment and the welfare of the surrounding

Public Infrastructure

Our roads and highways around the world are in constant need of improvement. Age, severe weather, and normal wear and tear can deteriorate the asphalt and create an unpleasant ride for the vehicle. When it is time to improve your local roads and highways, you must turn to a reliable construction contractor.

IC Corporation has a history of building and improving roads and highway systems. We are qualified to complete many of the important jobs that keep highways and streets safe. Our professionals can handle a wide range of jobs from resurfacing streets to developing new sections of a highway.

When searching for the right team, you should examine past areas of work and look for the length and speed of the project, the materials utilized, and the final cost. Our experienced team can help you determine what steps are the most cost effective to improve the local roadways; rebuild local roads and make every vehicle ride a safe experience.

communities. With more than 20 years of experience, it has completed many projects in compliance with ISO/BS/OHSAS international standards in Latin America, the Caribbean, and Europe.

Additionally, with stable PMI-qualified direct hiring experience, combined with sub-contracting track record, careful time management, and construction solutions ability in the harshest environmental conditions contribute to delivering quality EPC to the most demanding customers.

Commercial & Residential

IC Corporation Construction develops and builds commercial projects ensuring they are built promptly and decisively, implementing sustainable-design expertise. We offer the experience and stability of a self-financed, global company with localized teams attuned to the prime urban markets we serve.

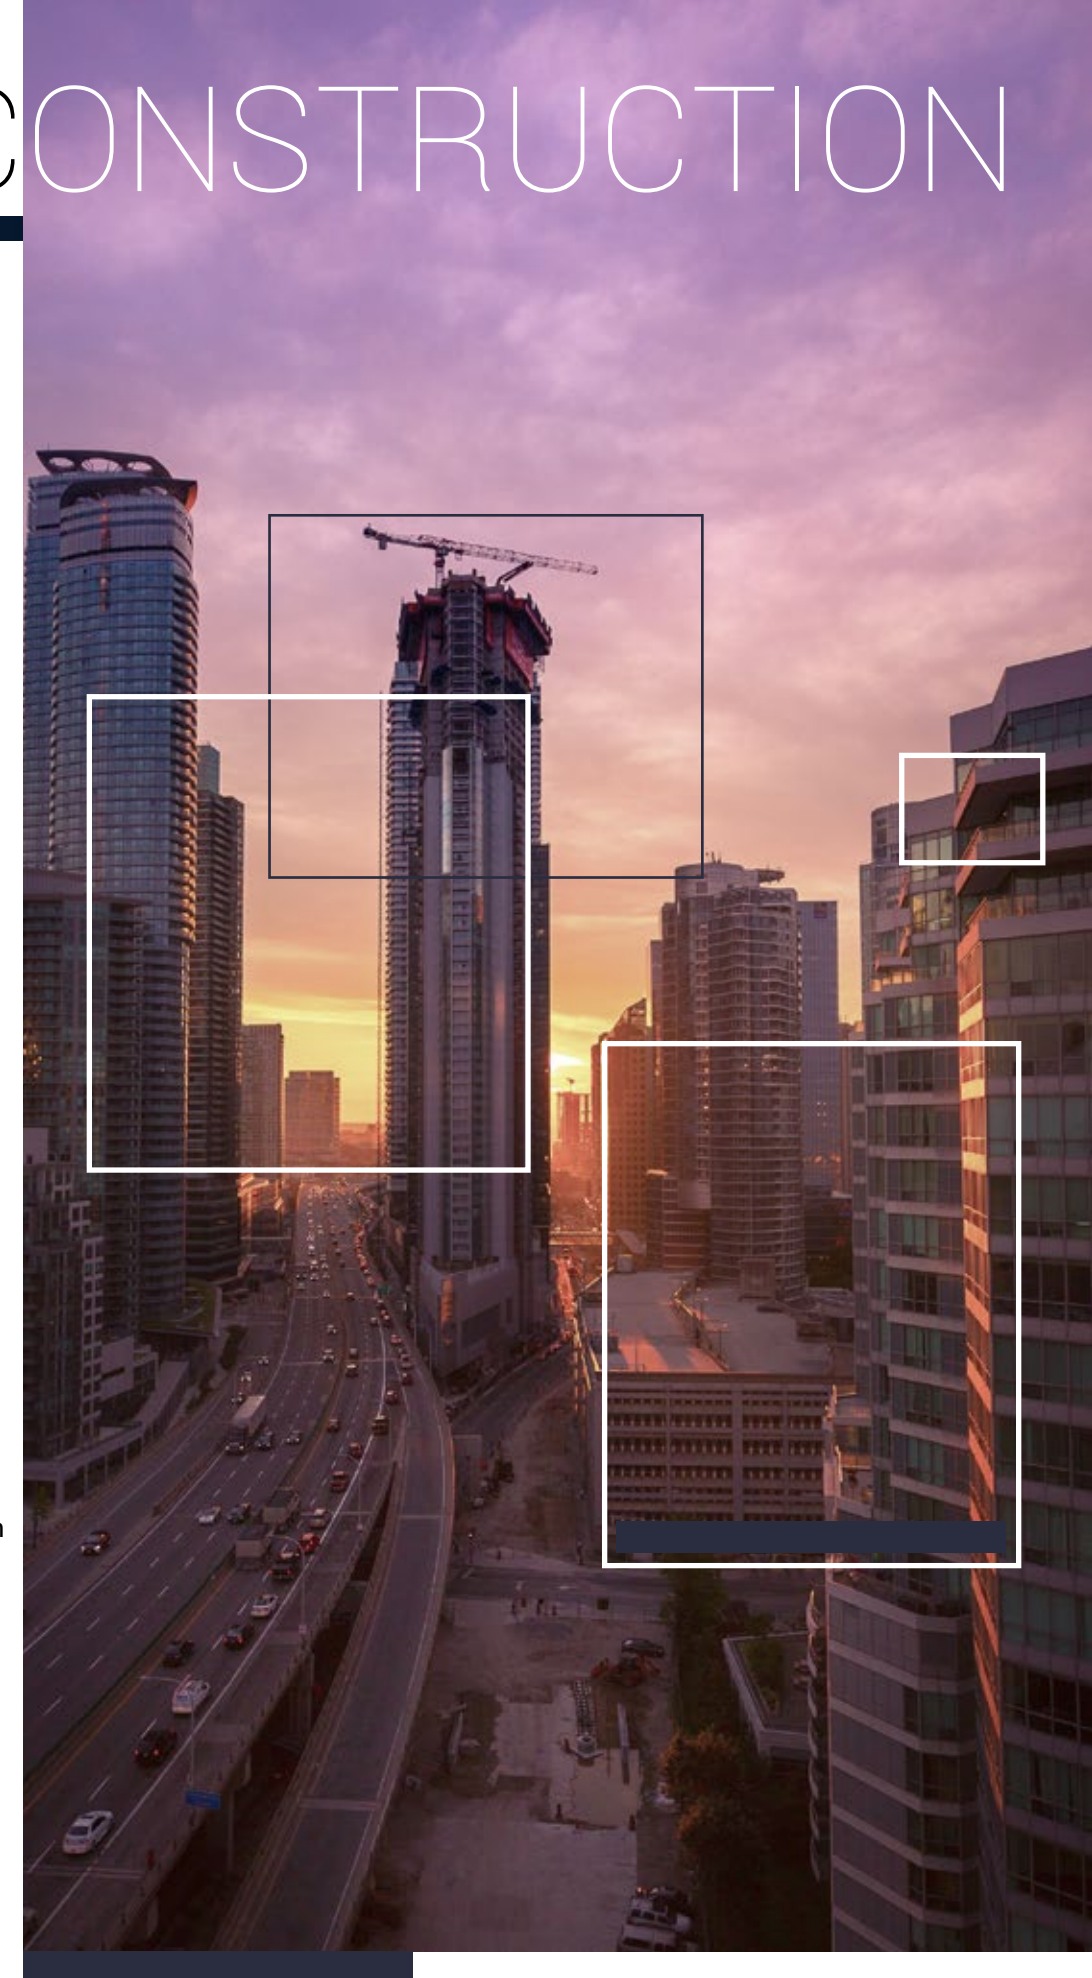

Our collaborative approach yields emerging sustainable design solutions that enhance the tenant experience, support the environment and lay the foundation for our customers' growth. We work with our clients as their long-term partner, providing financial support and global expertise for the development, design, construction, and operation of projects.

Life cycle costing optimizes the balance between construction and long term operational costs and can deliver significant financial and environmental benefits.

IC Corporation guides every aspect of the development process—finance, design, construction, and management—in a way that makes a positive impact on our community while generating strong returns for investors. We use high-quality, sustainable materials to ensure our buildings will last for generations, and we incorporate desirable amenities like large windows, open living spaces, first-floor retail, shared courtyards, and secure bike parking.

IC Corporation's knowledge is built on a foundation of high-quality materials, sustainable, transit-oriented design, and responsive property management, with floor plans and amenities to meet the needs of today's innovative businesses.

Our formula is simple: Inspired Modern design + quality construction = loyal tenants and greater returns for our partners and community.

IC CARES

The IC Cares Foundation was founded and established in 2011 as the philanthropic arm of IC Corporation to support humanitarian efforts in improving the quality of life in local communities. The Foundation also supports philanthropy efforts on a global scale as well, especially in areas of disaster relief and medical research and investigation.

Each year, the IC Cares Foundation donates funds to support various organizations involved with things such as animal rescue, community aid, and research and investigation. Sports development is also one of the many kinds of organizations IC Cares prides itself in funding.

IC Corporation, as a company, encourages its employees to volunteer their time and services following the Foundation's principles. Employees are also encouraged to seek out and identify organizations that support social projects which meet standard criteria for potential funding from IC Cares.

In Addition to funding non-profit organizations and promoting good Samaritan behavior, IC Cares Foundation also encourages and inspires others to take part in supporting projects and missions that focus on making the world a better place.
